Header

No change

Welcome to Altmetric Explorer

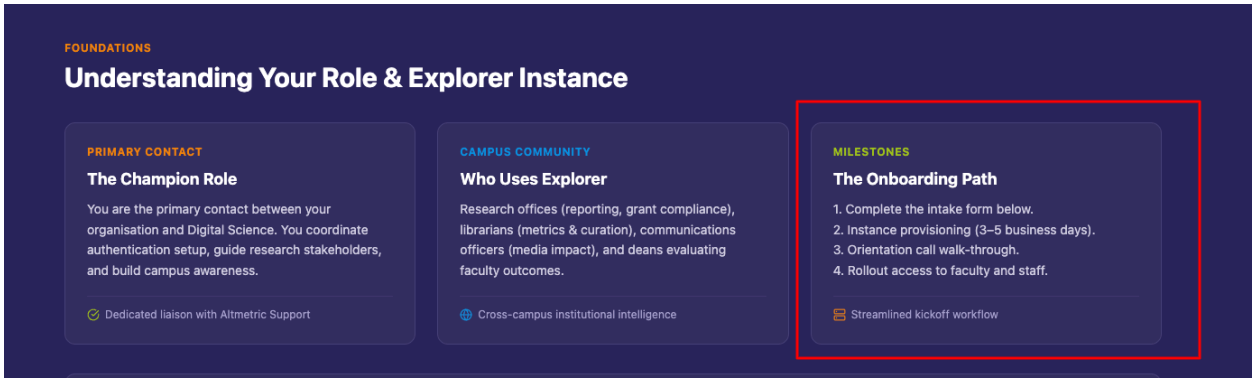

I do not want to use donuts that you made up. The site must use official Altmetric logos. Can you capture the image from the live preview on this page, https://docs.altmetric.com/badges/playground/? If not, let me know.

Change this, “As your institution's champion, this unified guide contains everything you need to configure access, integrate your institutional repository or CRIS, and deploy Altmetric badges across your campus.” to this, “As your institution's onboardomg champion, this unified guide contains everything you need to configure access, integrate your institutional repository or CRIS, and deploy Altmetric badges across your campus.”

Understanding Your Role & Explorer Instance

Note that:
Orientation calls may/may not be scheduled depending on the complexity of the integration
Rollout will be through on-demand classes

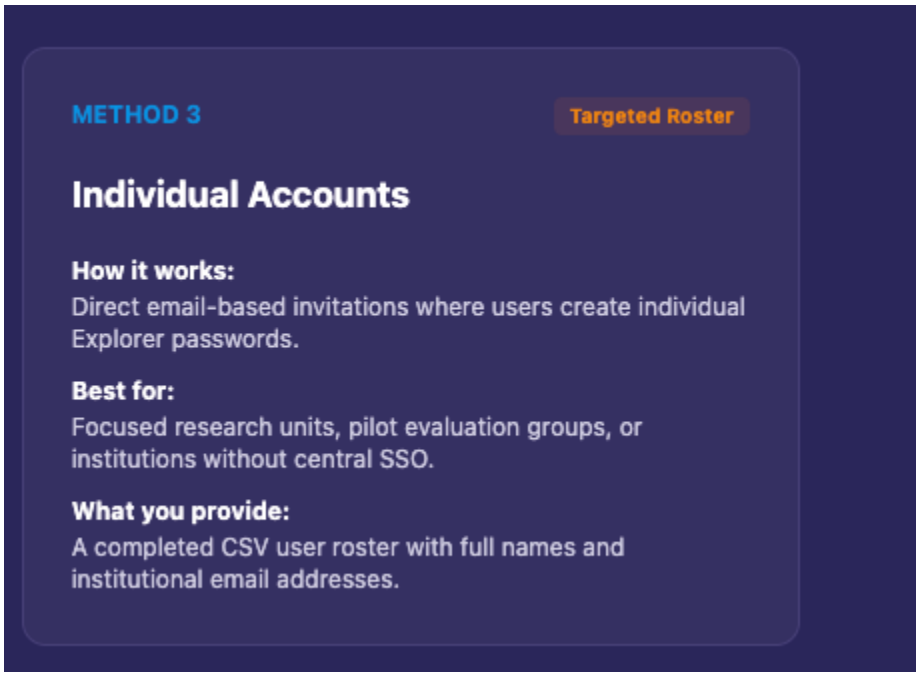

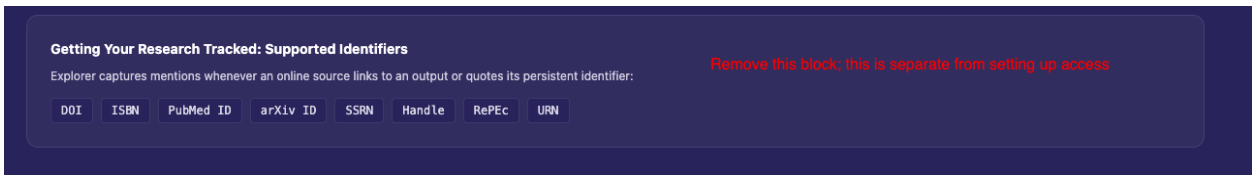

Change “Dedicated Explorer institutional tenant with isolated data” to “Dedicated Explorer instance”

Change “Institutional co-branding container for your university logo” to “Institutional co-branding container for your logo, if desired”

Setting Up Access: Three Core Methods

Include a note that this is the required access method for seat-limited subscriptions:

Institutional Data Integrations

This is the correct link for the Symplectic Elements “view documentation” :
https://docs.altmetric.com/implementation/efi/populating-data/#symplectic-elements

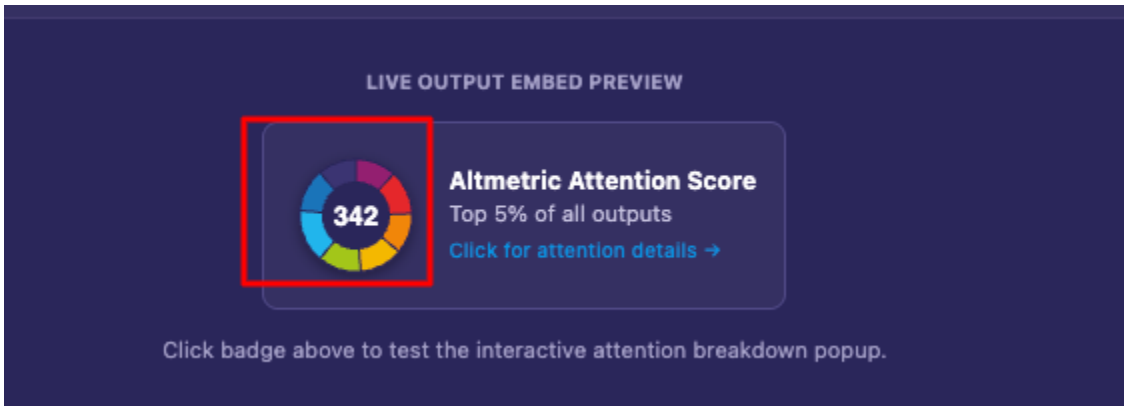

& this is the link for Pure documentation:
https://docs.altmetric.com/implementation/efi/populating-data/#pure

& this is the link for OAI-PMH feed documentation:
https://docs.altmetric.com/implementation/efi/populating-data/#harvesting-from-your-repository-oai-pmh-feed

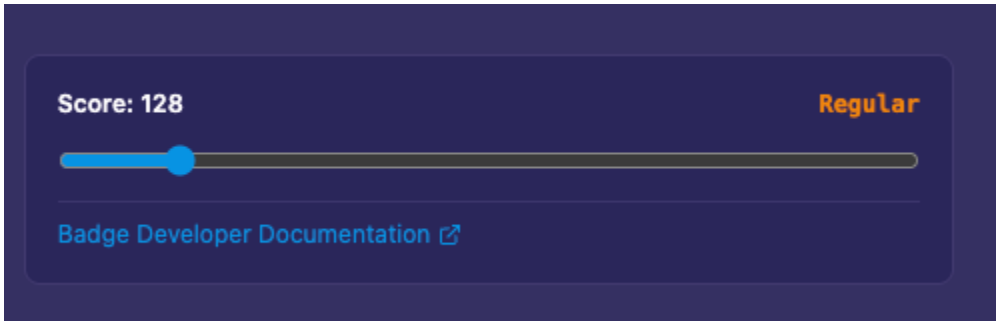

& this is the link for CSV documentation:
https://docs.altmetric.com/implementation/efi/populating-data/#send-your-publications-data-via-csv-spreadsheet
The CSV block does not need these notes, “Staging Preview: Integrations run on staging first with a preview link for your approval.” & “Share API credentials securely via Privnote.com to support@altmetric.com.”

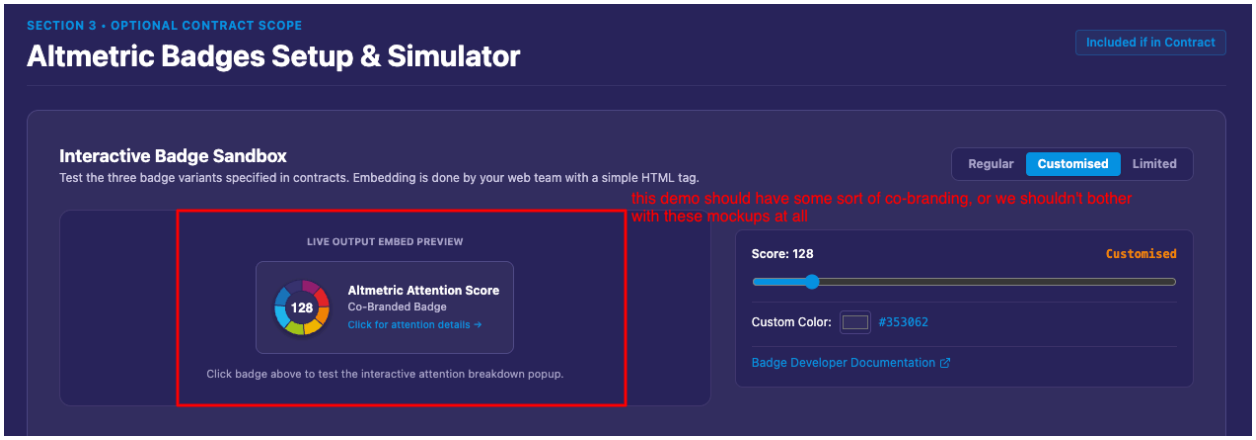

Altmetric Badges Setup & Simulator

Same feedback here - use a real badge image

Remove the slider; it adds no value; keep the link to the badge documentation
Same for the customized/limited badges

Intake form

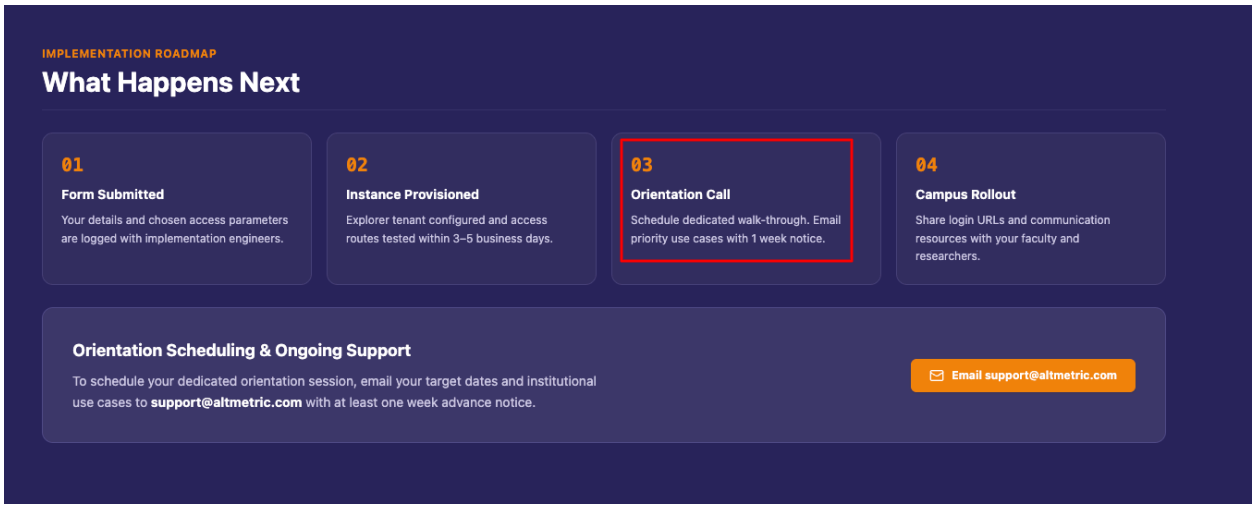

Tell me about this form. Where do the results go? Why didn't we use the forms I created, that you had access to in the documentation. Don't make changes. Answer the questions & give options BEFORE making changes.

Whatever form is used, users need a way to skip the sections not covered by their contracts (data integration, badges, etc)

This form is probably the place to capture whitelisting information, not above in section "setting up access"

What Happens Next

Adjust; orientation calls are only for complex setups
